Barcelona, Spain

Detail-oriented with out-of-the-box thinking. Innovative and creative in the problem-solving process. Specialist in **UI and API automation** using languages such as **Java, C# or Python.** Enthusiastic about **building frameworks and solutions from scratch**, researching and selecting the most suitable tools. Always learning and eager to help teammates grow.

Experience

Senior Test Automation Engineer

Sept 2023 - Oct 2026

Sopra Steria

The main responsibility in this position has been implementing an **automation framework from scratch** using Java, Selenium, TestNG, and ExtentReports. Designed as a Maven dependency, it enabled teams to quickly adopt test automation with minimal setup, requiring only project-specific configuration. After achieving this milestone, the next step was to implement automated tests for different projects. Another notable achievement has been the creation of a tool that automatically generates test automation methods based on input test data. I also use Claude Code throughout my daily workflow, which speeds up test creation by an estimated 15–20%.

Senior Test Automation Engineer

Feb 2022 - Sept 2023

Eurocap Mobility Group

In this project focused on mobility APIs and microservices, I have analyzed and designed tests based on feature requirements, ensuring thorough coverage and quality. Using Java and the **Cucumber (BDD)** framework, I developed new automated API tests that effectively validate functionality against defined requirements. As an advocate for BDD within the team, I facilitated Three Amigos sessions, bringing together business, development, and QA perspectives to build a shared understanding of the requirements and draft Gherkin scenarios that the team then refined and automated.

QA Engineer

Nov 2020 - Feb 2022

Shopery

As the **company's first and only QA engineer**, my main objective was to integrate testing into the development cycle of Scrum teams. I enhanced the workflow by introducing test documentation, execution, and automation processes. One notable achievement was the creation of a custom **automation framework from scratch** using Java and Selenium, which became a tool deployed in all projects. I spearheaded the investigation and implementation of a CI/CD infrastructure to streamline automated testing. TeamCity was chosen as the tool for continuous integration and delivery, making comprehensive testing part of every deployment.

Software Engineer in Test

Sept 2018 - Nov 2020

Oracle Netsuite

In this position, I analyze, design, and write tests based on feature requirements to ensure comprehensive coverage for an **enterprise merchandising solution** I develop both new automated UI and API tests to validate that functionality meets the defined requirements. Additionally, I maintain legacy automated tests to keep them up to date and functioning efficiently. Monitoring test runs provides valuable insights into potential issues that can be identified and addressed promptly. I facilitate Scrum meetings, participate in exploratory testing sessions to uncover hidden defects, and perform risk analysis to proactively identify and mitigate potential threats to project success.

Quality Assurance Engineer

Jul 2017 - Sept 2018

Cotecna

In this position, I analyze, design, and write tests based on feature requirements for a **governmental solution** focused on the inspection and verification of goods at borders. Manual execution of integration and regression tests ensures that functionality meets the defined requirements. To enhance the testing process, I initiated the development of an automation framework using C# and Selenium. By applying standard design patterns such as Singleton and Page Object Model during development, I ensured a scalable and maintainable solution that effectively supported the project's testing needs.

Quality Assurance

Nov 2015 - Mar 2017

Testcloud

In this role, I analyze, design, and write tests based on feature requirements to ensure comprehensive coverage for both a B2B/B2C travel portal and an application for **Futbol Club Barcelona** Manual execution of integration and regression tests validates that functionality meets the defined requirements. To improve the testing process, I develop new automated UI and API tests using Java and Selenium. Additionally, I maintain legacy automated tests to ensure they remain up to date and function effectively.

Software developper intern

Jun 2015 - Aug 2015

ICOF Lyon

As an intern, I was responsible for designing and developing a **multirole desktop application** for an educational institution using C# and implementing the MVC design pattern to improve organization and structure. I used MySQL for data persistence, ensuring efficient storage and retrieval of information. The primary objective was to centralize and organize the institution's core data and streamline administrative tasks for staff.

Skills

Development	Java, C#, Python
Automation	Selenium, Playwright, Rest Assured
AI tools	Claude Code, local LLMs, IDE integration
CI/CD and infrastructure	TeamCity, Jenkins, Docker
Web	JavaScript, jQuery, XPath
Database	SQL, MySQL, PL/SQL

Languages

English	Fluent (C1)
French	Native
Spanish	Native
Catalan	Native

Education

ISTQB Foundation	2018
Higher Vocational Diploma (CFGS) in Cross-Platform Application Development	2012-2015
Computer Science Degree	2010 - Not finished
